# About Us

Shufflebottom Ltd, a family run and owned business since 1977, manufactures high quality steel-framed buildings. Today we are one of the UK's largest independent manufacturers of steel-framed buildings for industry, agriculture, commerce and community use. With a workforce upwards of 80 employees and numerous teams of experienced erectors.

Our purpose-built seven-acre site is located just off the M4 – an ideal location for country-wide transportation. To manufacture as many components as possible in our own

factory has always been our philosophy, and to offer our customers both quality & economy. Holding steel stocks of up to 800 tonnes, continuously investing in new machinery enables our saw and drill line to process over 500 tones of fabricated steelwork per month. Proud to be one of the few manufacturers who roll-form their own single-skin box-profile cladding and also carry a wide range of steel-coil in an array of colours.

We manufacture a wide range of industrial buildings including large capacity storage units, company offices, retail units and car showrooms.

We have built chef Nick Nairn's cookery school and we work on larger-scale projects too, such as Castell Howell Foods' main distribution centre, Peterborough Community Church, Princess Way Retail Centre in Swansea, and Aberthaw Power Station and Cubric's shopping centre to name just a few.

Remember, we can design a building to suit your purpose and your site.
